Also worked with

C#, C++, Python, Lua, Unity, Blender, MySQL, PhpMyAdmin, MongoDB, Heroku, Microsoft Azure, Visual Studio, Visual Studio Code

Course level

Java

/languages

Finnish	Native
English	Fluent

/profile

Software developer and Software Engineering student in Tampere. I build TrinketBot, a Discord bot and web dashboard for streamers, as the founder of Claylake Interactive, in TypeScript and PostgreSQL. Open to part-time work alongside my studies.

/experience

Founder and lead developer, Claylake Interactive — Present

Business ID (Y-tunnus) 3659997-5

Build and run TrinketBot, a Discord bot and web dashboard for streamers and their communities, connected to Discord, Twitch, Kick, YouTube and TikTok.

TypeScript, Node.js, discord.js, Express, PostgreSQL, Next.js, React and Docker.

About 160,000 lines of TypeScript and about 135,000 lines of automated tests (October 2026). CI runs a secret scan, a dependency check, static analysis and a schema-drift check.

Work with AI coding agents under a process I set: write the spec first, change in small steps, and let tests and CI decide what ships.

Hamburger worker, Hesburger — Jul 2022 to present

Part-time alongside studies at Tredu and TAMK, over 4 years

Customer service, cash register, food preparation and keeping the restaurant clean.

Intern, Corpenet Oy, Tampere — Feb to Mar 2023

2 months

Team task: develop an internal statistics app for the company in TypeScript and C#, with React and React Native, using Microsoft Azure.

Also application maintenance, project management and team meetings.

MKM Konekeskus, Valkeakoski — Oct to Dec 2021

2 months

Servicing, maintaining and installing machines, and installing operating systems.

/education

Tampere University of Applied Sciences (TAMK) — In progress, 3rd year

Bachelor's studies, Communications and Technology, Software Engineering. Courses include web and API development, Linux and C/C++, algorithms and databases.

Tredu, Tampere — 2020 to 2023

Vocational qualification in software development. Graduated 2023.

/projects

Gamepanel, my own project — 2026

A web panel for game servers on a machine I own, private Tailscale network only. TypeScript, Fastify, React, SQLite. Running, still in development. Private repository.

TAMK web and API courses — 2026

Two Next.js and TypeScript apps with Prisma and PostgreSQL, and two Express REST APIs, with Docker and GitLab CI. Private repositories.

Jira app for a customer — 2026

School project: a Jira Cloud app that exports Roadmap epics to an Excel weekly timeline, built with a collaborator. Private repository.

Earlier school projects — 2020 to 2022

Card Game Adventure, a Unity card battle game playable in the browser on Unity Play. Fanikauppa, a front-end React shop prototype with a live page. More in the portfolio.
